

Pregnancy & Dental Care!

Receiving regular dental care during pregnancy is **safe and important** for both mothers and newborns.

Less than half of California's pregnant population (45 percent) is visiting the dentist.

WOMEN OF COLOR ARE **LESS LIKELY** TO VISIT A DENTIST.

Compared to **half** of white populations, only a **third** of Black or Hispanic populations **HAVE DENTAL CARE DURING PREGNANCY.**

WHITE POPULATIONS

BLACK/HISPANIC POPULATIONS

WHAT MAKES THIS SUCH AN IMPORTANT ISSUE?

- Oral health is an important part of **prenatal care**, not only for the overall health of pregnant women, but also for pregnancy outcomes and the oral health of newborns.
- Poor oral health during pregnancy has been associated with **adverse pregnancy outcomes^{1 2}** including:
 - preterm delivery
 - preeclampsia
 - gestational diabetes
 - worsening of conditions such as periodontal disease

Talk to your patients about scheduling regular dental appointments during pregnancy.
